# Leverage

## By Risk Profile

Portfolio Leverage – By Risk Profile

<sup>1</sup> Control investments are those which CalSTRS maintains control over acquisitions, dispositions, and financing, or has high liquidity in normal market conditions.

# RFA House View – Investment Implications

As of June 2022

- ▶ Over the last six months, **cap rates have likely expanded roughly 25-50 bps** with fewer bidders and more re-trades. Bid/ask spreads range from 5-10%, with meaningful variation by property type and strategy (more for properties with long leases that do not grow with inflation).
- ▶ **Institutional investors are confronting the denominator effect but are not wholesale sellers and continue to allocate capital to strategies** with solid fundamentals and strong long term demand drivers, and relatively attractive returns.
- ▶ Despite a potential recession over the next 24 months, **some real estate sectors should outperform** over next 5-10 years:
  - **Rental Housing** – Job growth and high housing prices will keep multifamily and single-family rental demand high, although supply is ramping up.
  - **Industrial** – Demand should stay very strong as e-commerce continues to expand and build out its supply chain.
  - **Niche Sectors** – Health care (medical office, life sciences, senior housing), data centers, and self storage have strong long-term demand drivers, but often require specialized investment and management expertise.
- ▶ **Caution is recommended for office and retail**, as structural shifts are ongoing, creating greater uncertainty. In addition, pricing is currently more attractive in the public markets for these and other property types.
- ▶ **Strong fundamentals and long-term growth factors support selective development and refurbishment** of rental residential, industrial, and some niche property types (medical real estate, self storage, data centers) and suggest caution for office and discretionary retail.
- ▶ The potential upcoming **slowdown will likely create investment opportunities**, although widespread distress is unlikely.
